THE GREAT OUTDOORS

UNLIMITED EARTH CARE INC.

Federico Azevedo's gardens integrate the natural landscape into a comprehensive and intentional landscape design. His understanding of architecture and the environment give each of his designs a perfect balance. His unique skills blend exotic with native plants, creating a landscape surprisingly reassuring and unexpected. He has developed numerous major landscaping projects in the last two decades, both commercial and residential. In his projects he develops long borders, planting masses of the same species of flowers, shrubs or trees. Implementing a combination of basic concepts—repetition of color, texture and shape—he imbues his gardens with simplicity, balance and a special elegance.

Federico Azevedo's approach is direct and personal, discussing individual clients' lifestyle, interests, and needs before proceeding with a project. Azevedo considers the architecture of the building and the grounds, and discusses the plants and structures that are best suited to achieve a harmonic design between structure and landscape. Maintenance is vital for the existence and preservation of any project. Azevedo provides full landscaping maintenance through his company Unlimited Earth Care, Inc.

Azevedo's creativity and botanical knowledge make him stand out in his field. He defines his work as follows: "It's a modern concept in that everything flows and is interconnected. The challenge is to keep the spaces open, while still providing interest and a diversity zone." His eclectic mix of plants that are both poetic and chaotic, controlled, and spontaneous. It's a contemporary design that speaks directly to the new global environment.
